Direct Emulsions

Top Performance and Reliability for Every Screen Printing Application

MacDermid Autotype Inc. is part of MacDermid Incorporated, a worldwide manufacturer of proprietary specialty chemical products and materials for the electronics, metal finishing and graphic arts industries. MacDermid Autotype specializes in the development, manufacture and distribution of films and chemicals for traditional printing and digital imaging markets and for high-tech industrial and optical applications.

Premium Solvent and Water Resistant Dual Cure Emulsion

Product description

Autotype Autosol XL is a high performance direct emulsion with outstanding image reproduction qualities. It is resistant to both solvents and water, making it an excellent choice for the most extensive range of screen printing applications. Use it for fine line artwork and four-color process work.

Available in 1-qt., 1-gal. and 5-gal. containers, as well as 50-gal. drums

Applications

- A wide range of graphics applications, from POP displays to advertising specialties
- Garment and textile printing, including t-shirts, fleecewear, caps, sports apparel and more
- Industrial screen printing applications
- Electronics, including rigid and flexible circuitry

Autotype Autosol XL Features and Benefits	
Superior printed edge quality and resolution	Prints a superior image on all types of images, from line work to fine halftones; an excellent choice for process color work
High durability	Resistant to a wide range of screen printing inks, including solvent-based, water-based, UV-curable, plastisol and other textile inks.
Humidity resistance	Long run durability even in high humidity conditions
Widest range of compatible inks	No need to use another emulsion when changing ink systems
Direct Addition Diazo	Faster mixing eliminates one step from the emulsion mixing process
Application versatility	Outstanding choice for an extensive range of screen printed product specialties, regardless of print-quality requirements or the ink system being used

Premium Quality Solvent and Water Resistant Emulsion

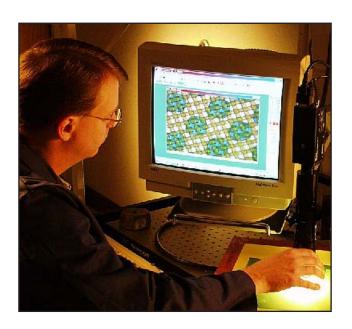

Product description

Autotype Autosol 8000 is a premium dual cure direct emulsion that offers superior image reproduction, resistance to both solvents and water, and the toughest stencil available in the product range. Autotype Autosol 8000 is the best choice when the job requirements demand the best print quality and an extremely tough stencil.

Available in 1-qt., 1-gal. and 5-gal. containers, as well as 50-gal. drums.

Applications

- 4-color process
- Fine detail artwork
- Industrial applications including electronic parts, membrane switch components, flexible circuitry, nameplates and decals.
- · Garment printing
- · Graphics printing

Autotype Autosol 8000 Features and Benefits	
Superior printed edge quality and resolution	Prints a superior image on all types of images, from line work to fine halftones; an excellent choice for process color work
Highest durability	Resistant to the most aggressive screen printing inks. The most durable emulsion in the product line
Humidity resistance	Long run durability even in high humidity conditions
Wide range of compatible Inks	No need to use another emulsion when changing ink systems
Direct Addition Diazo	Faster mixing eliminates one step from the emulsion mixing process
Application Versatility	Outstanding choice for an extensive range of screen printed product specialties, regardless of print-quality requirements or the ink system being used

Autotype Autosol Classic

The Original Dual Cure Autosol

Product description and applications

For over 15 years, screen printers all over the world have relied on **Autotype Autosol Classic** for its versatility, durability and excellent copying qualities. Autotype Autosol Classic is resistant to both solvents and water, yet it is easy to reclaim. Its easy-to-use features make it an excellent choice as an 'all purpose' emulsion for a very wide range of applications.

- · Electronics applications and Industrial printing, including membrane switch components, decals, and nameplates
- All types of garments, including t-shirts, fleecewear, sports apparel, and caps
- Signs, posters, banners, ad specialties, POP displays and all other graphics applications

Autotype Autosol Classic Features and Benefits	
Compatible with a wide variety of ink systems	Resistance to both solvents and water makes this emulsion highly suitable for virtually any type of print job as well as the longest print runs.
Excellent mesh bridging	Requires fewer coats to reach desired stencil-surface and and print-definition characteristics
Excellent humidity resistance	Ideal for use in shops where high humidity leads to stencil breakdown during print runs
Relatively fast exposure	Minimizes opportunity for light undercutting (sawtoothing) and speeds screen production

Autotype Autosol TX

Diazo Sensitized Premium Textile Direct Emulsion

Product description and applications

AUTOSOL TX is a high quality, 40% solids, pigmented aqueous emulsion of water soluble dispersible polymers and monomers, supplied with diazo powder sensitizer.

AUTOSOL TX is resistance to a wide range of textile inks including water based, plastisol as well as solvent and co-solvent inks. AUTOSOL TX is particularly recommended for applications where the very highest print durability and print quality **is** required, especially in extreme printing environments, while remaining reclaimable after printing.

Autotype Autosol TX Features and Benefits	
Application versatility	Resistant to wide range of textile inks
Direct Addition Diazo	Faster mixing eliminates one step from the emulsion mixing process
Highly durable	Excellent in adverse shop conditions, especially in high heat and humidity
High flexibility	Forgiving to aggresive stress on stencil during printing and cleaning

General Purpose Solvent and Water Resistant Direct Emulsion

Product description

Autotype Autosol 7000 is a very durable high resolution dual-cure direct emulsion that is compatible with a wide variety of screen printing inks and suitable for use in an extremely wide range of printing applications. Available in 1-qt., 1-gal. and 5-gal. containers, as well as 50-gal. drums.

Autotype Autosol 7000 Features and Benefits	
High durability	Excellent in adverse shop conditions, especially in high heat and humidity
Humidity resistance	Long run durability even in high humidity conditions
Widest range of compatible inks	No need to use another emulsion when changing ink systems
Wide exposure latitude	Forgiving to some degree of underexposure and overexposure
Direct Addition Diazo	Faster mixing eliminates one step from the emulsion mixing process
Application versatility	Good for shops that print a diverse range of products and require excellent printed image quality, even for four-color process work
Easy reclaiming	Faster screen turnaround, less labor to reclaim

Applications

- General graphics applications, including POP displays, posters, signage, exhibition graphics, etc.
- Industrial applications include membrane switch overlays, circuitry, nameplates, automotive parts, labels and decals
- · Garment and textile printing

Autotype Autosol 6000 and 6000CL

High Quality Water Resistant Textile Printing Emulsion

Product description and applications

Autotype Autosol 6000 is a diazo sensitized direct emulsion formulated specifically for garment decorating and textile printing applications. The standard product is a pigmented (purple) emulsion, while the 6000CL is a 'clear' formulation, for those occasions when on-press registration is important.

Applications for Autotype Autosol 6000 and 6000CL include garment and textile applications such as t-shirts, fleecewear, caps, fabric banners, bolt textiles, and more. Available in 1-qt., 1-gal. and 5-gal. containers, as well as 50-gal. drums.

Autotype Autosol 6000 Features and Benefits	
Very high solids content	Faster stencil build on coarse meshes saves time and reduces blemishes in emulsion coating.
Direct Addition Diazo	Eliminates the need to dilute and mix sensitizer prior to adding to the emulsion.
Available in 'clear' version	Very lightly pigmented. Promotes easy visual registration on the press.
High durability	Very good for long print runs
Good decoating properties	Enables reuse of the mesh, even though it produces a highly durable stencil.

Autotype Autosol 2000

Fast Exposing Multi-Purpose Dual Cure Direct Emulsion

Product description and applications

Autotype Autosol 2000 is a quality, durable direct emulsion formulated for a wide variety of applications where rapid stencil production is important.

Autotype Autosol 2000 is a good choice for general graphics applications, including POP displays, posters, signage, exhibition graphics, etc. Industrial applications include membrane switch overlays, nameplates, labels and decals.

Autotype Autosol 2000 Features and Benefits	
Fast exposure	Good for use in high production shops or where weak light sources or excessive exposure distance requires a fast-exposing emulsion, e.g. large format graphics applications
Humidity resistance	Long run durability even in high humidity conditions
Direct Addition Diazo	Faster mixing eliminates one step from the emulsion mixing process
Application versatility	Good for shops that print a diverse range of products and want to use just one emulsion.
Wide exposure latitude	Forgiving to a reasonable amount of underexposure

Autotype Autosol XFT

Pre-sensitised Photopolymer Emulsion for Computer to Screen Exposure

Product description and applications

Autosol XFT is an ultra fast exposing, 35 – 36% solids red pigmented photopolymer based direct emulsion.

AUTOSOL XFT has been formulated specifically for DMD Computer to Screen direct exposure, and is primarily intended for large format graphics applications using solvent based and UV curing inks.

Autotype Autosol XFT Features and Benefits	
Exposure times	Signtronic CTS unit - Coating 2+1 380 / 32 yellow mesh, 350 - 380 speed @ 260 – 330 columns. Coating 2+1 230/40 white mesh, 260 speed @ 471 columns. CST unit - Coating 2 + 1 380 / 33 amber mesh 20 – 25 cm/sec.
Very fast exposing	Fast screen production turnaround, even where weak light sources are used
Quick & easy washout	Reduces processing time, less labor to washout
Easy reclaiming	Faster screen turnaround, less labor to reclaim

Autotype Autosol ONE

Presensitized Graphics and Textile Emulsion

Product description and applications

Autotype Autosol ONE is a presensitized photopolymer emulsion formulated for high-end screen printing applications which use solvent-based, UV-curable and plastisol inks. Autotype Autosol ONE features the best image reproduction and extremely fast exposure. Screen printers will be pleased to learn that the superior performance comes with a very economical price tag.

Autotype Autosol ONE is recommended for all graphic screen printing applications and has proven to be an excellent performer in textile and garment printing. Industrial applications include membrane switch overlays, circuitry, nameplates, automotive parts, labels and decals. It also includes garment and textile printing.

Autotype Autosol ONE Features and Benefits	
Photopolymer sensitized	No mixing or waiting for emulsion to rest after mixing. Use straight from the container.
Very fast exposing	Fast screen production turnaround, even where weak light sources are used
Highly durable	Resistant to the most aggressive printing conditions, such as high heat and humidity, aggressive inks and solvents; very good for long print runs
Superior image resolution and definition	Prints a superior image on all types of work, including fine line detail and process color
Versatility	Encompasses a very wide range of screen fabrics and types of print jobs, eliminating the need for using different emulsions for different applications

Presensitized Direct Emulsion for Garment and Textile Printing

Product description

Autotype Autosol 9000 is high solids, fast exposing presensitized photopolymer-type emulsion for garment and textile decorating applications. This is an excellent choice for garment printers who are looking for an easy to use emulsion that produces high stencil build with fewer coats on coarser meshes. Can be used for various applications including: all types of garments, including t-shirts, fleecewear, sports apparel, and caps. Available in 1-qt., 1-gal. and 5-gal. containers, as well as 50-gal. drums.

Autotype Autosol 9000 Features and Benefits	
One part system	Eliminates the need to sensitize prior to use
Excellent coating quality	Reduced drag on the coating trough for faster and smoother coating with less effort
Very fast exposure	Significant time savings for large volume shops and where weak light sources are used
Very high solids	Fewer coats yield the desired stencil thickness, even on coarse meshes. Compared to other SBQ-based emulsions, Yields as much as 25-50% higher stencil build with the same number of coats (depending on mesh count).
Good exposure latitude	Forgiving to as much as 25% overexposure, an important feature for such a fast exposing emulsion

Autotype Autosol Neptune

Presensitized Photopolymer Emulsion for Garment, Textile and POP Applications

Product description

Autotype Autosol Neptune is a very fast, blue One-part photo emulsion, especially recommended for the Textile and POP graphic industries and is resistant to water based, plastisol & UV inks.

Autotype Autosol Neptune Features and Benefits	
Ultra fast exposure	Exposure time is 20x faster than average photopolymer emulsions
Wide ink compatibility range	Works well with water based, plastisol, and UV inks
High durability; Reclaimable	Very good water and solvent resistance; yet, easily reclaimable

Autotype Autosols at a Glance

Your choice of emulsion affects the outcome of the finished job, as well as job costs and production efficiency. Always select an emulsion based on the needs of your shop and the requirements of the job.

^{*} Autosol XFT - See page 8 for recommended exposure times * Data not available for all emulsions on all exposure units. Screen variables will significantly affect optimum exposure times. Use this chart as a starting point, and for the most accurate exposure estimates , run a test with the MacDermid Autotype Exposure Calculator whenever screen variables (mesh, coating thickness, etc.) change.

¹ Test conducted with 230 tpi dyed (yellow) mesh coated 2+2 wet on wet.

² Test conducted with 110 tpi dyed (yellow) mesh coated 2+2 wet on wet.

The Autotype Autosol Family of Emulsions

Whether you run a high volume shop coating hundreds of screens per day or make just a few screens per week, there is an Autotype Autosol emulsion to fit your every need. The Autotype Autosol family of direct emulsions has been continually improved over the years to stay in step with the ever-changing and challenging job requirements of screen printers. So if you're looking for a high-resolution emulsion to print process color or fine lines, look no further. If speed or economy are your top priorities in selecting a stencil material, you will find an Autotype Autosol that fits the bill.

Autotype WR Hardener A&B

To achieve maximum durability and water resistance, apply a 50:50 mix of the A and B components of Autotype WR Hardner to the processed and dried stencil. The stencil will be very difficult to reclaim. For a less permanent stencil use Hardener A on its own.

Availability: The A and B components are sold separately and are offered in 1-liter containers.

Before and after you use that stencil...

At some point, most stencils will be removed and the mesh will be reused. For fast screen turnaround and to get the most out of your mesh, count on the complete range of mesh preparation and screen reclaiming products from MacDermid Autotype.
