

Screen Printing Application

Textile

Stencil selection for textile printing applications is influenced primarily by ink type, ie water based / plastisol inks and image quality, ie spot colour or process colour. Run length will also determine what mesh count is used and how durable the stencil needs to be. Whatever the application, from short run glitter prints, to reel to reel printing with a discharge ink, there is an Autotype branded screen making product that is perfect for your application.

Screen Printing Application
